LifeShield™ Connect

Capture infusion data across all clinical areas throughout your facility with a single, innovative auto documentation software solution.

human connections

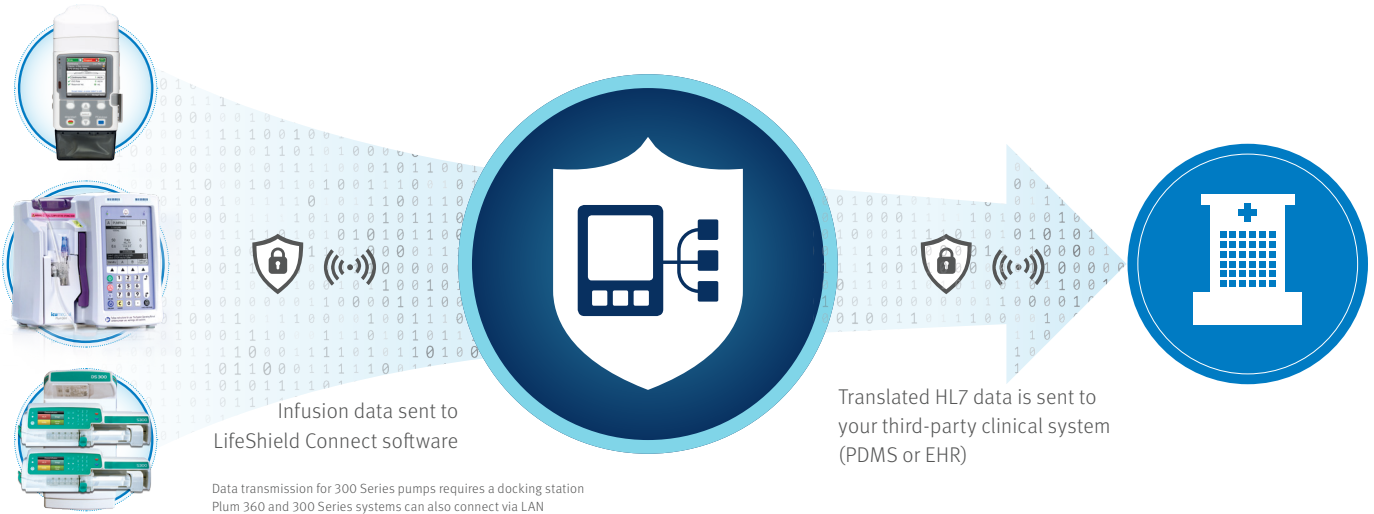

Focus on patient care, not paperwork

Nurses caring for even a few critically ill patients often manage upwards of 30 infusions simultaneously, and documenting these infusions can feel like a full-time job.

LifeShield Connect software automatically captures and documents infusion data across CADD-Solis™, 300 Series, and Plum 360™ infusion systems. This helps ensure comprehensive automated documentation while allowing nurses to shift their focus back to where it matters most—providing patient care.

Streamline and simplify infusion documentation

LifeShield Connect software streamlines data transfer from ICU Medical infusion pumps to your Patient Data Management System (PDMS) or Electronic Health Record (EHR), enabling efficient workflows by reducing manual documentation, and enhancing documentation accuracy and timeliness.

LifeShield Connect operates seamlessly in the background, automatically streaming data to multiple third-party PDMS or EHR systems without the need for manual input or a user interface.

Help to ensure accurate, secure data transmission

LifeShield Connect software securely streams data into a unified Health Level Seven (HL7) output compatible with multiple third-party PDMS and EHR systems. Robust encryption (TLS certificates) help to ensure secure data transmission while enhancing the overall cybersecurity of ICU Medical smart pumps.

Learn how you can streamline and simplify infusion documentation today by contacting your local sales representative.
